

Reliable data, zero hassle.

Data Validator add-on module.

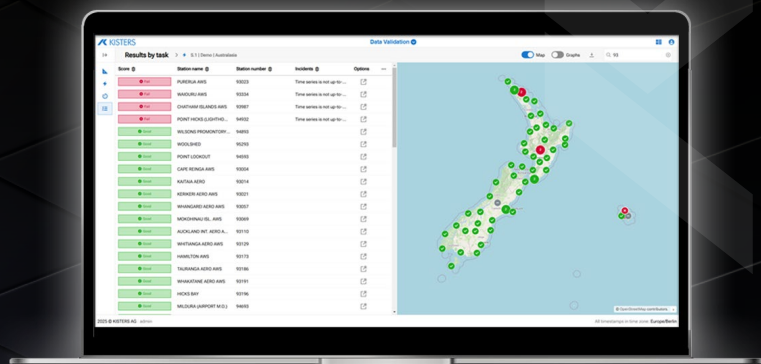

Data teams often spend countless hours manually checking, cleaning, and verifying incoming data. This tedious process slows down decision-making and increases the risk of errors slipping through – potentially causing costly compliance failures or operational mistakes.

The Data Validator module automates these quality checks by continuously cleansing and verifying data streams in real time, ensuring you always work with accurate, reliable data – reducing manual effort and boosting confidence in every decision.

What it does:

- Automatically cleans and verifies incoming data streams from all sources
- Detects anomalies, missing values, and errors before they impact your operations
- Provides real-time quality dashboards and alerts for immediate action
- Fully configurable rules tailored to your operational needs
- Integrates smoothly with your KISTERS data platform and workflows

Benefits you'll experience:

- ✓ Dramatically reduce manual data correction time
- ✓ Improve data trustworthiness across teams
- ✓ Increase operational confidence with proactive quality management
- ✓ Accelerate compliance reporting with validated datasets

Ideal for:

Data managers, quality assurance leads, consultants, and anyone responsible for maintaining data integrity in complex water and environmental systems.

“Before Data Validation, we spent hours each week chasing down data errors. Now, the automated checks flag issues immediately, freeing us to focus on analysis and decisions with confidence.”

– Water Utility Data Manager

How it works:

Data Validation acts as your automated watchdog – cleansing, verifying, and monitoring your data in real-time, so you're always working with the most accurate, reliable information. It seamlessly plugs into your existing KISTERS environment – no disruption, just cleaner data.

Discover how Data Validation can free your team from tedious data checks.
