

Effortless detection of extraneous water with AI for sewer systems.

Identify and locate unwanted runoff in your sewer system with our innovative combination of the Datasphere web platform and advanced Artificial Intelligence (AI). Unlike traditional measurement campaigns, which can be expensive, time-consuming, and infrequent, Water+

provides continuous and automated sewer level measurements to accurately pinpoint the amount and location of extraneous water entering your system. Save time, money, and effort while ensuring effective management of your sewer infrastructure.

Why choose WATER+?

See actionable information in a single place.

Use a web browser to view real-time water levels and potential points of unwanted inflow in your sewer system.

Intuitive.

Works with inventory data and with real-time data from level sensors installed in the sewer shafts.

Always Up-To-Date.

Analyses existing data using advanced AI technology – every day, all year round.

Self-improving.

Become more and more accurate as it learns from the data on an ongoing basis.

Compliant.

Adaptable to local guidelines and is based on the latest scientific methods.

Utilise existing sensors.

Easily integrate measurements from existing sensors as input to AI.

Fully web-based.

No need to buy IT hardware – we host the system for you.

Integrate other operational data.

Expand the system with additional data you need for optimal operation, such as weather data and forecasts.

More about datasphere and WATER+.

KISTERS Datasphere™ is a state-of-the-art cloud solution for real time environmental monitoring and alerting, acting as a central data hub that seamlessly integrates and visualises multiple data sets. With customisable interfaces designed to meet your specific needs, Datasphere transforms data into actionable insights, providing intelligent optimisation and decision support tools.

WATER+ is an AI-driven solution that continuously detects and locates extraneous water in your sewer system.

Together, they help you minimise maintenance costs and increase resilience, promoting sustainable environmental protection and improved service.

Who we are.

We're KISTERS - and for over 60 years we've specialised in helping our customers collect, analyse and share the environmental data that will shape the future.

Through innovative, digitally-focused solutions, we develop advanced systems that enable our customers to capture and manage information at a higher quality than ever before. So they can create the solutions our world needs to thrive.

With our partner Pluvion, we combine our expertise in data management with the latest developments in artificial intelligence to give you the insight into your sewer system you need to operate and maintain it efficiently for years to come.
